

Valley County

October 2008

Work Force Trends

Population

Valley County is the 30th most populous county among Idaho's 44 counties. After a brief period of declining population in 2002, more than 1,400 new full time residents have moved to Valley County since then, a growth rate of 18.9 percent. At various times of the year there seems to be many more people in the county than the population figures indicate as the number of well-off second homeowners have risen. In addition, the robust construction activity fueled by Tamarack Resort and its land buyers and investors has contributed to a large number of construction workers from out of the area living in Valley County while working on the myriad of construction projects. The weekends are also very busy as hundreds of people flock to the area from Ada and Canyon counties to take advantage of the multitude of recreational opportunities available in Valley County in every season.

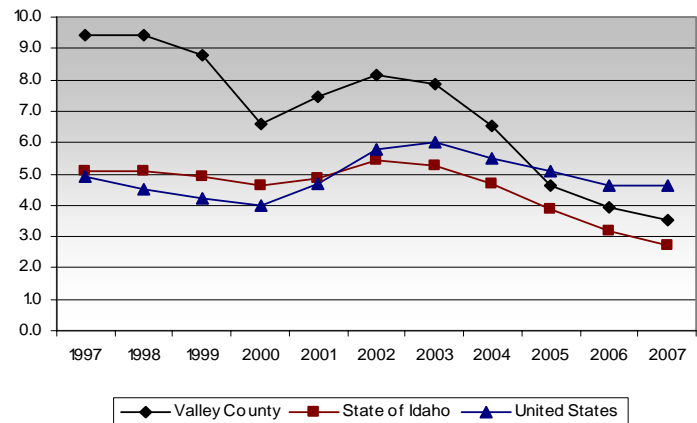

Labor Force & Employment

The county's civilian labor force experienced an increase over the 10-year period of 1997 to 2007 growing by 1,056 people up from 1996 to 2006's growth of 824 people and up from the 10-year increase of 627 from 1995 to 2005. The 1,056 person increase was a growth rate of 25.1 percent. Similar to the population of Valley County, it seems the labor force has increased much more than it has but many of the people working in Valley County don't call it their home, and are therefore not counted in the labor force. Over the last 10 years the average annual unemployment rate has fluctuated from a high of 9.4 percent in 1997 and 1998, to consecutive years of full employment at the commonly accepted level of below four percent coming in at 3.8 percent in 2006 and 3.6 percent in 2007.

The growth of Valley County nonfarm payroll jobs slowed in 2007. The beginning of the year started off okay but by early summer things began to slow down. Construction which had been driving much of the job creation only added nine jobs in 2007 as the slowing national economy and problems at

Unemployment Rates

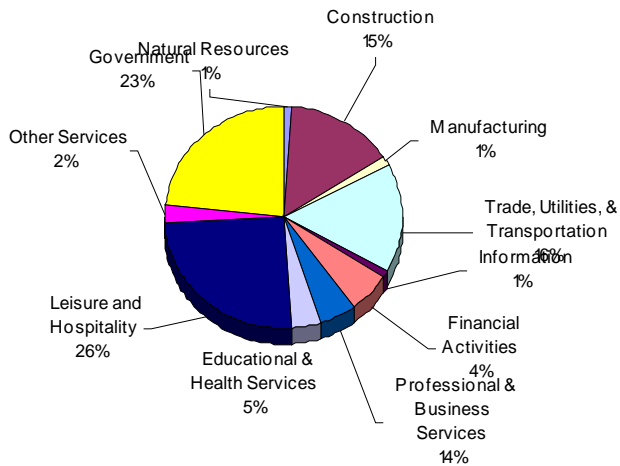

Tamarack Resort essentially brought building activity to a halt. These factors were subsequently felt in other industries such as financial activities which lost 23 jobs during the year. Most other industries managed to eek out job gains albeit at a much slower pace than the previous three years. Valley county continued to add jobs in tourism related industries at a slower pace however as leisure and hospitality only added 17 jobs in 2007 down from a 100 job gain in 2006. Normally not a big job creator, government agencies added more jobs than the two driving industries did in 2007 coming in at an increase of 20 new jobs, as the bad fire season created a need for some additional personnel.

Labor Force	Sep 2007	Sep 2008

Employment	3,812	3,764	3,689	3,844	3,733	3,675	3,686	3,942	4,431	4,736	5,084

Nonfarm Payroll Jobs for 2007

Per Capita Income & Employment

Between 2004 and 2005 Valley County moved from fourth in the state in per capita income to third. A 5.1 percent increase moved per capita income from \$32,480 up to \$34,126, well above the state per capita income and slightly below the national per capita income. Valley County continues to have a growing number of wealthy residents moving to the area furthering comparisons to Blaine County and the Sun Valley area. Valley County has become a tourist destination and growth in industries such as leisure and hospitality and trade show it. Time will tell how the problems with the tourism industry and construction will affect covered employment in the coming year but the chance of these industries declining is pretty good.
